Press release

Channel5 Flow: MGI's Artificial Intelligence solution is being modernised

Channel 5, the Artificial Intelligence logistics solution developed by MGI, has been modernised to offer the *Channel 5 Flow* service directly integrated into the Ci5 PCS (Port Community System). From Tuesday 27 September, Ci5 users will have seen a new "Risks" tab in the application's "Manifest" sub-menu. With the *Channel5 Flow* service, MGI gives users the ability to receive notifications directly in Ci5 if any goods require special processing or if the Manifest files may contain wrong information. This truly predictive tool increases visibility, optimises productivity and ultimately contributes to the attractiveness of the port of Marseille.

Channel 5 won the Port of the Future Trophy for the best innovation in the logistics category, as well as the Jury's Choice Award at the Med/INNOVANT competition in 2017. Developed in collaboration with List, the CEA Tech institute for smart digital systems, the solution's three services (*Channel5 Flow*, *Channel5 XPECT*, *Channel5 Daily*) will ultimately provide logistics operators with a real-time overview of the fluidity of port operations and terminal access, along with forecasts of expected cargo flows at import and export shipping terminals. Thanks to their Artificial Intelligence engine, the three Channel 5 services also detect problems that could impact goods transit and instantly propose alternative solutions to the professionals affected.

"Channel5 contributes to the digital transformation of port entities by using Big Data and artificial intelligence," says Christophe Reynaud, Innovation Manager at MGI. "By identifying the volumes and various risks associated with port activity in advance, Channel5 provides better visibility. With improved knowledge of volumes, priorities and obstacles to overcome, operators can allocate resources and organise their work more efficiently. Channel5 thereby enhances supply chain productivity, agility and robustness."

ABOUT MGI

As a recognised expert in Port Community Systems (PCS), we innovate to streamline and speed up cargo data exchanges between all private and public stakeholders. Our vision to "Connect supply chains using a smart information system offering smooth door-to-door goods transit and tracking" has guided the development of the Port Community System.

We are ISO 27001 (Information Security Management) certified, and support ports of the future and logistics providers in becoming more competitive by implementing our solutions.
